What is Prisma?

</> TechZeen
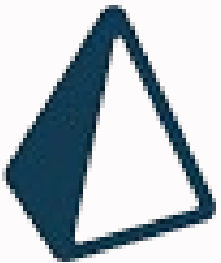

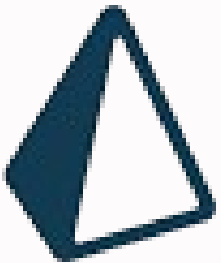

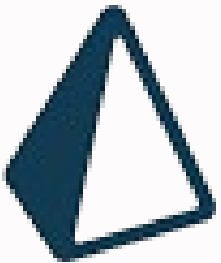

- Prisma is a modern ORM (Object Relational Mapper).
- It connects your backend code with your database in a structured and type-safe way.
- Think of it as a translator between your app and the database.

Why use Prisma?

</> TechZeen

- Auto-generates types, so fewer bugs.
- Great developer experience with auto-completion.
- Built-in migration system (no manual DB changes).
- Works perfectly with TypeScript and NestJS.
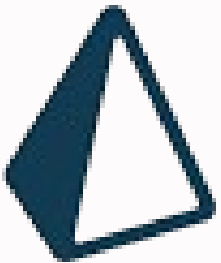

What is Neon DB?

- Neon is a free, serverless PostgreSQL database in the cloud.

- You don't need to install PostgreSQL locally.

- Just sign up, get your DB URL, and you're ready to go.

Why Prisma + Neon = Perfect Combo🔥

- Both are fast, scalable, and easy to set up.
- Prisma integrates smoothly with Neon just paste the DB URL.
- No local setup, no hassle, perfect for beginners and pros.
